Activity 1: Explore the hub

Summary:

- Familiarize yourself with the hub.
- Open an app, and interact with it by making a selection.
- Observe the response from numerous objects on a sheet.

Qlik Sense app: Vintage Movies

Challenge

Familiarize yourself with the Qlik Sense hub by doing the following:

- Upload the **Vintage Movies** app, as required.
- Navigate through the apps to become familiar with the environment.
- Search for *movies* and open the app that matches the search criteria.
- Analyze the data associated with *John Ford*.

Hints

- Visualizations in an app can be used to make selections.

Step-by-step guide

1. In the hub, explore the various navigational components to become familiar with the environment.
2. To upload an app, use the **Add new** option and **Upload app**.
3. Ensure the **Space** drop-down selection displays **Personal**, and from the student collateral, drag the file *Vintage Movies.qvf* to the drop area to upload it.

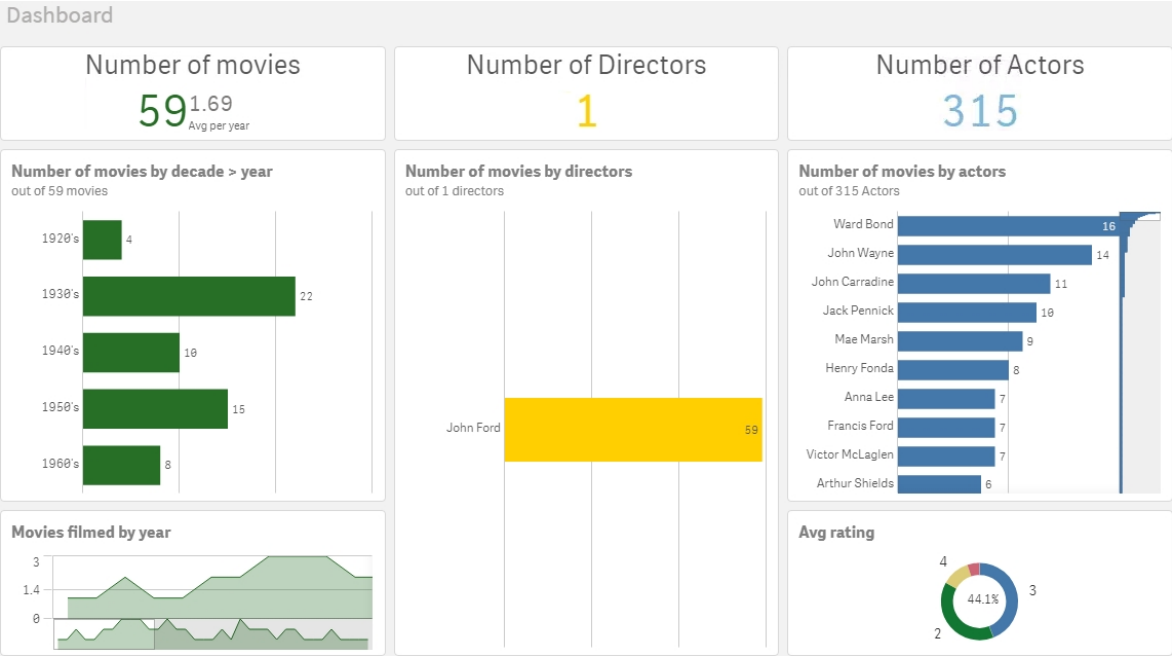
   Qlik Sense on Windows: The required demonstration app is already available within the environment. Search for *movies* to filter the available apps. Any one of the apps is fine to use for the remainder of this activity.

4. Open the **Vintage Movies** app.
5. Locate and open the **Dashboard** sheet.
6. Make a selection by clicking on *John Ford* in the *Number of movies by directors* bar chart, and confirm your selection. All the visualizations update with this selection because the data is associated. Check your app against the solution below.

   Note: Because of the responsive nature of the product, your solution might not be an exact replica of the image below. This is because the size and the position of the visualizations on the **Dashboard** depend on your device's resolution.

7. Clear all your selections.

Solution



Activity 2: Navigate within an app

Summary:

- Switch between app sheets.
- Explore bookmarks.
- Use a bookmark to navigate to a pre-defined selection.

Qlik Sense app: Vintage Movies

Challenge

Explore the **Vintage Movies** app and familiarize yourself with the user interface by doing the following:

- Use the **Navigation** menu to locate the view which will allow you to verify when the data was last loaded.
- Navigate through the sheets and explore their contents.
- Use the **App overview** to change the view mode to **List view**.
- Identify which bookmarks are currently available in this app.

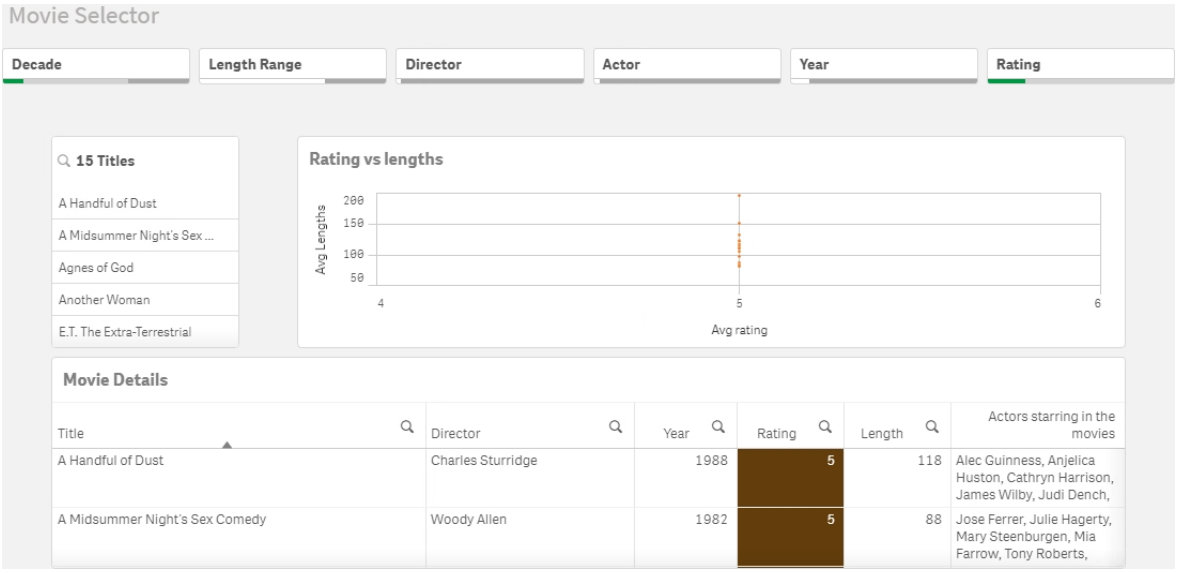
Hints

- Sheets, bookmarks, and stories can be accessed from both the **App overview** and **Sheet** interface.
- Select **Movies from 1980's Rating 5** bookmark.

Step-by-step guide

1. Re-open the **Vintage Movies** app, if required, and navigate to the **App overview**, as necessary.
2. Locate and open the **Dashboard** sheet. This is one way you can navigate to sheets in the app.
3. Navigate to the **Movie Selector** sheet using the **Sheets** icon from the toolbar. This is another way you can navigate to sheets in the app.
4. Navigate to the next sheet in the app using the arrow buttons from the toolbar. This is a way to navigate consecutively forwards or backwards through the sheets.
5. Check if you can edit the sheet. If editing is allowed, enable the edit mode in the sheet.
6. If you are in edit mode, navigate through the editing options, then exit edit mode.
7. Explore other buttons on the toolbar; hover over each button to see the tool tips pop-up.
8. Navigate back to the **App overview** using the **Navigation** menu.
9. Change the view mode from **Grid** to **List view**. All the sheets appear in a list format.
10. Navigate to the **Bookmarks** view. The app contains one bookmark, **Movies from 1980's Rating 5**.
11. View the bookmark details by clicking the **Details** icon. The information provided contains a description, fields in which selections were made, and the sheet that will be activated when the bookmark is selected.
12. Close the bookmark details panel by clicking the icon a second time.
13. Select the bookmark to open the sheet. The **Movie Selector** sheet appears with selections in *Rating* and *Decade*. Compare the sheet with the solution image.

Solution



Activity 3: Create a new app

Summary:

- Create a new analytics app.
- Alter the app properties and thumbnail.

Qlik Sense app: My New App

Challenge

Create a new analytics app and name it *My New App*. In the new app, complete the following:

- Add an app description to achieve two things:
  - Better understand the contents of the app
  - Facilitate the search process
- Replace the default thumbnail with an image.

Hints

- The new app can be created in the hub.
- A description can be added in the **Create a new app** pop-up window or, after you open the app, in the app editor.

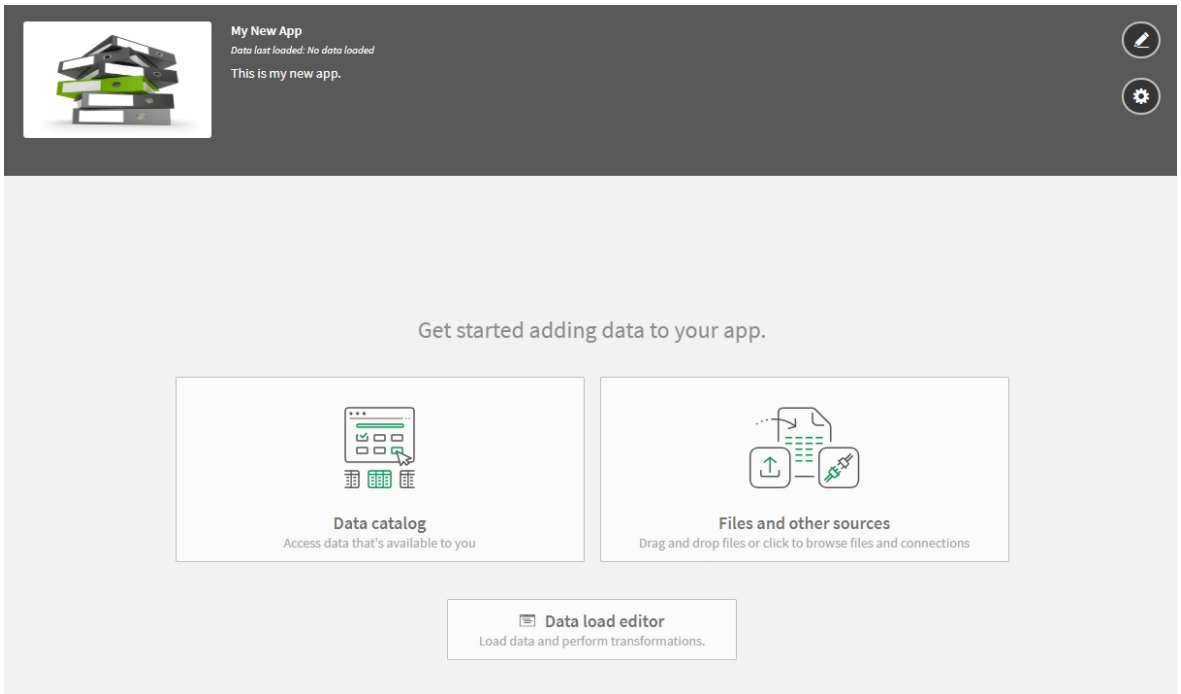
Step-by-step guide

1. Navigate back to the hub, if required.
2. Create a new analytics app and name it *My New App*.
3. Add a brief description to the app: Type *This is my app*.
4. Open the app.
5. Edit the app description by clicking on the app's **Edit** icon: Update the description to read *This is my new app*. (Check the Solution image.)
6. Click on **Change thumbnail** on the default image displayed for the app to open the **Media library**.
7. Activate the **Upload media** option and from the student collateral, drag the *Invoices.jpg* file into the dialog, to upload it.
8. Click the image to use it as the image for the app.

   Qlik Sense on Windows: The required *Invoices.jpg* image is already available for use in the **Default** library. Select it and Insert it.

9. Save your changes and stop editing by clicking the green check. Then, close the app.
10. Check the changes in the hub. Refresh the hub, if needed.

Solution



Activity 4 - Challenge: Add data to a Qlik Sense app

Summary:

- Use the Add data feature.
- Load multiple tables from a spreadsheet file.
- Associate the tables using a drag and drop interface.

Qlik Sense app: My New App

Challenge

Add data to the app named **My New App**, using the file *SalesData_MultiTabs.xlsx*, located in the student collateral.

Qlik Sense on Windows: The *SalesData_MultiTabs.xlsx* file is located in the *C:\Qlik Sense Data\QuickDataLoad* folder.

Then, complete the following:

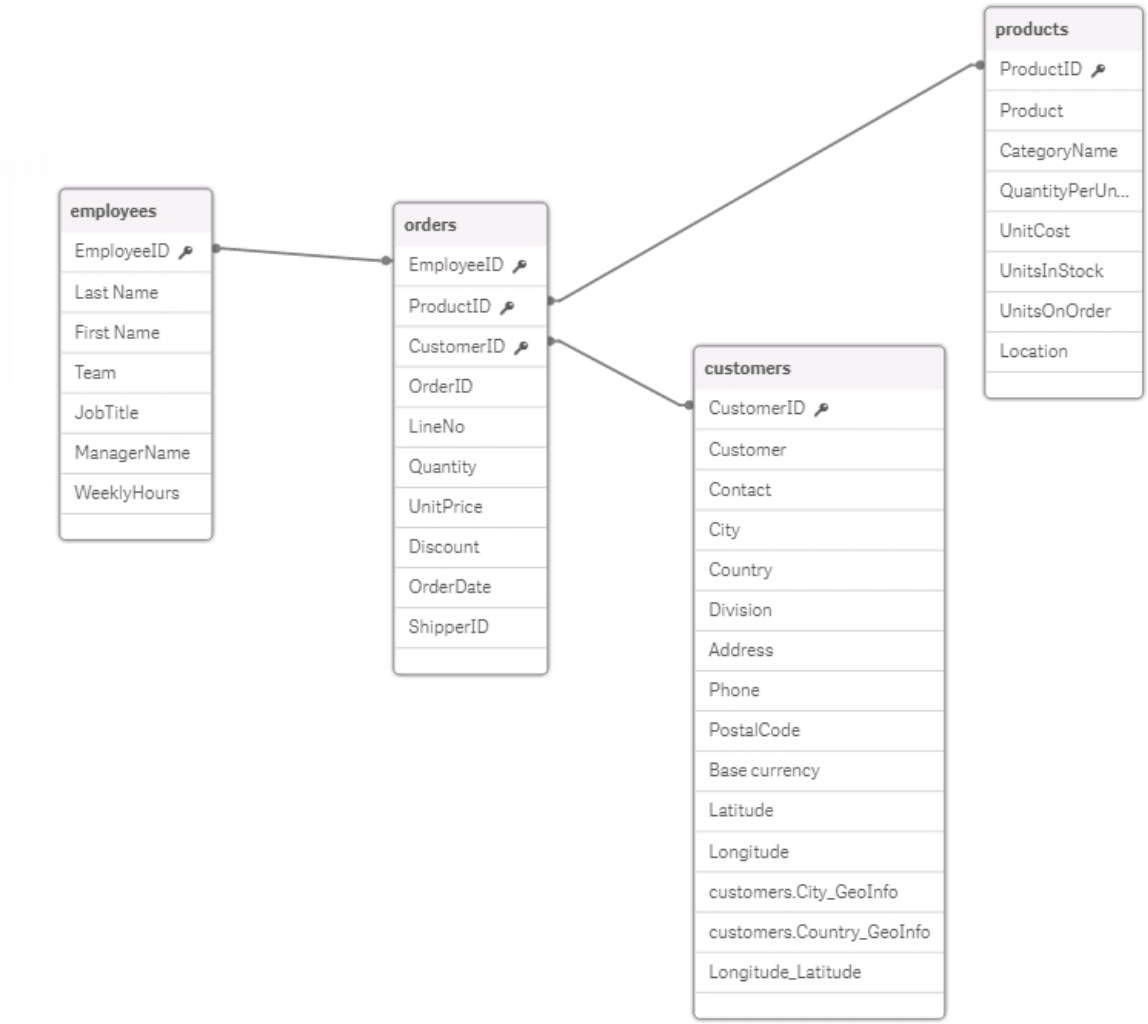
- Validate that the data has been imported correctly.
- Locate the view that will allow you to prepare your data.
- Create the associations between the tables to form the data model.

Note: The objective of this **challenge** is to test whether you feel comfortable with the concepts that have been discussed so far in your class. There is no **Step-by-Step** section in this activity, so you must only rely on the **Hints** below to understand the tasks you have to execute.
As you are still new to many of these concepts, please don't hesitate to reach out for more guidance (help file, instructor, Qlik Community).

Hints

- The data can be loaded into the app using the **Add data** option.
- Load all the tables included in the file, into the app.
- Using the **Data manager > Associations** view, the following associations must be created:
  - *orders* - *products* (*ProductID* field).
  - *orders* - *customers* (*CustomerID* field).
  - *orders* - *employees* (*EmployeeID* in the employees table must be associated to the *EmployeeKey* in the *orders* table. Optionally, name the new field *EmployeeID*).
- After the data is loaded, the results can be reviewed using the **Data model viewer**. All the tables should be associated.

Solution



Activity 5: Managing script sections

Summary:

- Create a new analytics app.
- Modify app properties.
- Create and arrange a plan of script sections.

Qlik Sense app: ABC Sales Data

Challenge

Create a new analytics app named *ABC Sales Data*. In the new app, complete the following tasks:

- Upload and use the *SalesChart.jpg* file, located in the student collateral.

  Qlik Sense on Windows: The required *SalesChart.jpg* image is already available for use in the **Default** library.

- Add the following 3 script sections:
  - *Orders*
  - *Products*
  - *Customers*

From this activity onwards and throughout the rest of the course, you will use this app to develop new content, edits, etc. The app is going to be based on the ABC Apparel Inc. scenario.

Hints

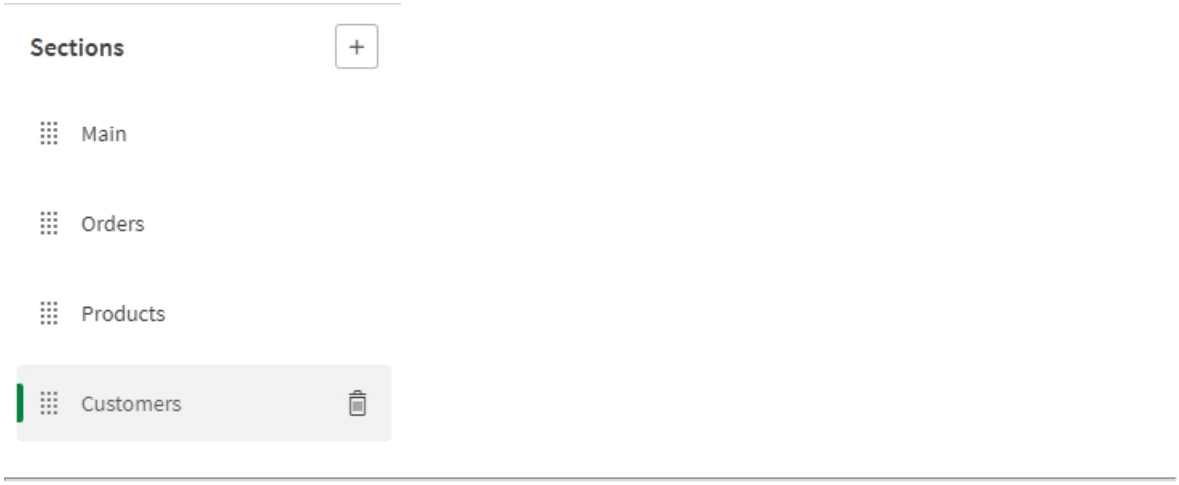
- New apps can be created in the hub.
- Images can be added to the content library using the **Upload media** option.
- Script sections can be added in the **Data load editor**.

Qlik Sense Desktop: Images located under **%Documents%\Qlik\Sense\Content\Default** are displayed in the **Default** content library.

Step-by-step guide

1. At the hub, add a new analytics app and name it *ABC Sales Data*.
2. Leave the app default settings and click the **Create** button to open the app for editing.
3. Replace the default app thumbnail with the *SalesChart.jpg* image, provided with the course collateral. Make sure the image is in place before you execute this step.

   Qlik Sense Desktop: The image must be added into the **%Documents%\Qlik\Sense\Content\Default** folder.
   Qlik Sense on Windows: If the image does not exist in the **Default** content library, upload it from the **C:\Qlik Sense Data\ABC Images** using the **Upload media** feature. If **Upload** is not possible, use an image of your choice.

4. Open the **Data load editor**.
5. Create a new script section in the **Sections** area and name it *Products*.
6. Add three additional script sections, and name them: *Sales*, *Dates*, and *Customers*.
7. Drag to move **Sales** before **Products**, but after **Main**.
8. Rename the **Sales** section to *Orders*.
9. Delete the **Dates** section, as you do not need it at this time.


Solution
